

# PRODUCT SPECIFICATION

*Part Number*  
**PLC3020A-YDWW3**

## *Details*

- Single Color Surface Mount LED
- PLCC-2 3.0 x 2.0 x 1.3mm
- 3,000 piece reels
- Emitting Color: Warm White
- InGaN chip material

## *Features*

- Wide viewing angle 120°
- JEDEC MSL 2a
- Compatible lead-free reflow soldering process
- RoHS Compliant

## *Mechanical Dimensions*

### Notes:

1. Specifications subject to change without notice
2. Tolerance of measurement of dimensions:  $\pm 0.2\text{mm}$

### Device Selection Guide

| Model Number   | Chip     |                | Encapsulation  |
|----------------|----------|----------------|----------------|
| PLC3020A-YDWW3 | Material | Emitting Color | Silicone Resin |
|                | InGaN    | Warm White     |                |

### Absolute Maximum Ratings at Ta=25 °C

| Parameter                    | Symbol | Rating                                                                | Unit |
|------------------------------|--------|-----------------------------------------------------------------------|------|
| Power Dissipation            | Pd     | 105                                                                   | mW   |
| Forward Current              | IF     | 30                                                                    | mA   |
| Peak Forward Current (1)     | IFP    | 100                                                                   | mA   |
| Reverse Voltage              | VR     | 5                                                                     | V    |
| LED Junction Temperature (2) | Tj     | 110                                                                   | °C   |
| Operating Temperature        | Topr   | -40~+85                                                               | °C   |
| Storage Temperature          | Tstg   | -40~+100                                                              | °C   |
| Soldering Temperature        | Tsol   | Reflow Soldering: 260°C for 10 sec<br>Hand Soldering: 350°C for 3 sec |      |

Notes: 1. Pulse width  $\leq 0.1$  msec, duty  $\leq 1/10$

2. Proper current rating must be observed to maintain junction temperature below the maximum at all the time.

### Electrical and Optical Characteristics at Ta=25 °C

| Parameter             | Symbol         | Min. | Typ. | Max. | Unit    | Condition |
|-----------------------|----------------|------|------|------|---------|-----------|
| Forward Voltage       | VF             | --   | 3.1  | --   | V       | IF=20mA   |
| Luminous Flux         | $\Phi_v$       | --   | 5.5  | --   | lm      |           |
| Viewing Angle         | 2 $\theta$ 1/2 | --   | 120  | --   | deg     |           |
| Color Rendering Index | CRI            | 90   | 95   | --   | Ra      |           |
| Reverse Current       | IR             | --   | --   | 10   | $\mu$ A | VR=5V     |

### Luminous Flux Rank Limits (IF = 300mA)

| Part Number    | Luminous Flux |         |         |         |
|----------------|---------------|---------|---------|---------|
|                | P45           | P50     | P55     | P60     |
| PLC3020A-YDWW2 | 4.5-5.0       | 5.0-5.5 | 5.5-6.0 | 6.0-6.5 |

Note: Tolerance of measurement of luminous flux:  $\pm 7\%$

### Forward Voltage Rank Limits

| VF Rank | Min | Max | Unit | Condition |
|---------|-----|-----|------|-----------|
| V28     | 2.8 | 2.9 | V    | IF = 20mA |
| V29     | 2.9 | 3.0 |      |           |
| V30     | 3.0 | 3.1 |      |           |
| V31     | 3.1 | 3.2 |      |           |
| V32     | 3.2 | 3.3 |      |           |
| V33     | 3.3 | 3.4 |      |           |

### Color Rank Limits (IF = 20mA)

| Rank F Color Temperature:3500~3700K |        |        |        |        |        |
|-------------------------------------|--------|--------|--------|--------|--------|
| F1                                  |        | F2     |        | F3     |        |
| CIE X                               | CIE Y  | CIE X  | CIE Y  | CIE X  | CIE Y  |

### Reel Dimensions

- (1) Quantity: 3,000/Reel  
 (2) Tolerance  $\pm 0.2\text{mm}$  unless otherwise mentioned

### Packaging

Note: Specifications subject to change without notice

## ■ Cautions –

Users should be cautioned not to stare at the light of this LED product. The bright light can damage the eye

## ■ Soldering Characteristics –

### ● Hand Soldering

|                       |       |               |
|-----------------------|-------|---------------|
| Soldering temperature | 350°C | One time only |
| Soldering time        | 3 sec |               |

### ● Reflow Soldering

| Reflow Soldering                     |                                           |                                                                                  |
|--------------------------------------|-------------------------------------------|----------------------------------------------------------------------------------|
|                                      | Lead Solder                               | Lead-free Solder                                                                 |
| Pre-heat                             | 120~150°C                                 | 180~200°C                                                                        |
| Pre-heat time                        | 120sec.Max.                               | 120sec.Max.                                                                      |
| Peak                                 | 240°C Max                                 | 260°C Max                                                                        |
| Temperature Soldering time Condition | 10sec.Max. refer to Temperature-profile A | 10sec.Max. refer to Temperature-profile B (N <sub>2</sub> reflow is recommended) |

### A: Lead Solder

## B: Lead-free Solder

### Notes:

- \*Although the recommended soldering conditions are specified in above table, reflow or hand soldering at the lowest possible temperature is desired for the LEDs.
- \*A rapid-rate process is not recommended for cooling the LEDs down from the peak temperature.
- \*All temperatures refer to solder Pad.

## ■ JEDEC Information –

JEDEC is used to determine what classification level should be used for initial reliability qualification. Once identified, the LEDs can be properly packaged, stored and handled to avoid subsequent thermal and mechanical damage during the assembly solder attachment and/or repair operation. PLCC 3528 series are certified at level 2a.

### Characteristics for PLCC 3528 series

| Level | Floor Life |             | Soak Requirements |            |                        |            |
|-------|------------|-------------|-------------------|------------|------------------------|------------|
|       |            |             | Standard          |            | Accelerated Equivalent |            |
|       | Time       | Condition   | Time(hours)       | Condition  | Time(hours)            | Condition  |
| 2a    | 4 weeks    | ≤30°C/60%RH | 696+5/-0          | 30°C/60%RH | 120+1/-0               | 60°C/60%RH |

**Notes:** The standard soak time includes a default value of 24 hours for semiconductor manufacturer's exposure time (MET) between bake and bag, and includes maximum time allowed out of the bag at the distributor's facility

# ■ Reliability-

### Notes:

Measurements are performed after allowing the LEDs to return to room temperature.

● **Failure Criteria**

| Criteria # | Items                  | Conditions | Failure Criteria              |
|------------|------------------------|------------|-------------------------------|
| #1         | Forward Voltage(VF)    | IF=60mA    | >U.S.L.X1.1                   |
|            | Luminous Intensity(IV) | IF=60mA    | <L.S.L.X0.7                   |
| #2         | Forward Voltage(VF)    | IF=60mA    | >U.S.L.X1.1                   |
|            | Luminous Intensity(IV) | IF=60mA    | <L.S.L.X0.5                   |
| #3         | Solderability          |            | Less than 95% solder coverage |

U.S.L.: Upper Specification limit    L.S.L.: Lower Specification Limit

■ **Handling of Silicone Resin LEDs-**

● **Handling Indications**

- i. When handling the product, do not touch it directly with bare hands as it may contaminate the surface and affect on optical characteristics. In the worst cases, excessive force to the product might result in catastrophic failure due to package damage and/or wire breakage.

- ii. When handling the product with tweezers, LEDs should only be handled from the side and make sure that excessive force is not applied to the resin portion of the product. Failure to comply can cause the resin portion of the product to be cut, chipped, delaminated and/or deformed, and wire to be broken, and thus resulting in catastrophic failure.

- **Pick and place**

Recommended conditions: Outer nozzle  $> \Phi 2.5\text{mm}$

Avoid direct contact to the encapsulant with picking up nozzle. Failure to comply might result in pick and place processes or damage to encapsulant. In the worst cases, catastrophic failure of the LEDs due to wire deformation and/or breakage.

- **Storage –**

- **Storage Conditions**

A. Before opening the package:

The LEDs should be kept at  $\leq 40^{\circ}\text{C}$  and  $\leq 90\%\text{RH}$ . The LEDs should be used within a year. When storing the LEDs, moisture proof packaging with absorbent material (silica gel) is recommended.

B. After opening the package:

The LEDs should be kept at  $\leq 30^{\circ}\text{C}$  and  $\leq 60\%\text{RH}$ . The LEDs should be soldered within 672 hours (4 weeks) after opening the package. If unused LEDs remain, they should be stored in moisture proof packages, such as sealed containers with packages of moisture absorbent material (silica gel). It is also recommended to return the LEDs to the original moisture proof bag and to reseal the moisture proof bag again.

- If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.

Baking treatment: more than 24 hours at  $60 \pm 5^{\circ}\text{C}$

- This product has silver plated metal parts that are inside and/or outside the package body. The silver plating becomes tarnished when being exposed to an environment which contains corrosive gases. Any LED with tarnished leads may lead to poor

solderability and deterioration of optical characteristics. Please do not expose the LEDs to corrosive atmosphere during storage.

- After assembly and during use, silver plating can be affected by the corrosive gases emitted by components and materials in close proximity of the LEDs within an end product, and the gases entering into the product from the external atmosphere. The above should be taken into consideration when designing.

### ■ Moisture Proof Package –

- When moisture is absorbed into the SMT package it may vaporize and expand during soldering. There is a possibility that this can cause exfoliation of the contacts and damage to the optical characteristics of the LEDs. For this reason, the moisture proof package is used to keep moisture to a minimum in the package.
- The moisture proof package is made of an aluminum moisture proof bag. A package of a moisture absorbent material (silica gel) is inserted into the aluminum moisture proof bag. The silica gel changes its color from blue to red as it absorbs moisture.
- Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation can occur.

### ■ Recommended circuit –

- In designing a circuit, the current through each LED must not exceed the absolute maximum rating specified for each LED. It is recommended to use Circuit B which regulates the current flowing through each LED. In the meanwhile, when driving LEDs with a constant voltage in Circuit A, the current through the LEDs may vary due to the variation in forward voltage (VF) of the LEDs. In the worst case, some LED may be subjected to stresses in excess of the absolute maximum rating.

- This product should be operated in forward bias. A driving circuit must be designed so that the product is not subjected to either forward or reverse voltage while it is off. In particular, if a reverse voltage is continuously applied to the product, such operation can cause migration resulting in LED damage.

### ■ Heat Generation –

- Thermal design of the end product is of paramount importance. Please consider the

heat generation of the LED when making the system design. The coefficient of temperature increase per input electric power is affected by the thermal resistance of the circuit board and density of LED placement on the board, as well as other components. It is necessary to avoid intense heat generation and operate within the maximum ratings given in this specification.

- The operating current should be decided after considering the ambient maximum temperature of LEDs.

#### ■ Static Electricity –

- Static electricity or surge voltage damages the LEDs. It is recommended that a wrist band or an anti-electrostatic glove be used when handling the LEDs.
- All devices, equipment and machinery must be properly grounded. It is recommended that precautions be taken against surge voltage to the equipment that mounts the LEDs.
- When inspecting the final products in which LEDs were assembled, it is recommended to check whether the assembled LEDs are damaged by static electricity or not. It is easy to find static-damaged LEDs by a light-on test or a VF test at a lower current (below 1mA is recommended).
- Damaged LEDs will show some unusual characteristics such as the leak current remarkably increases, the forward voltage becomes lower, or the LEDs do not light at the low current.

Criteria: ( $V_F > 2.0V$  at  $I_F=0.5mA$ )

#### ■ Cleaning –

- It is recommended that isopropyl alcohol be used as a solvent for cleaning the LEDs. When using other solvents, it should be confirmed beforehand whether the solvents will dissolve the package and the resin or not. Freon solvents should not be used to clean the LEDs because of worldwide regulations.
- Do not clean the LEDs by the ultrasonic. When it is absolutely necessary, the influence of ultrasonic cleaning on the LEDs depends on factors such as ultrasonic power and the assembled condition. Before cleaning, a pre-test should be done to confirm whether any damage to the LEDs will occur.
